Name: No preview of exam results from the "History" tab.

Preconditions: Running application.

Steps:

1. Press the "History" button in the main panel.

Expected result: A list of passed exams will appear on the left and a "Clear history" button will appear. Each item on the list includes: the number of positive answers, the number of total answers on the exam, the scoring percentage, the date and time of the exam.

Current result: No records of completed exams, due to the inability to complete the exam.

Environment:

- system type: 64-bit operating system, x64 processor
- version: Windows 10 Home; 22H2

Priority: high- the inability to save the exam and view the history deprives the user of the ability to monitor their results.

Repeatability: the error occurs when the application is launched repeatedly.

"No records of completed exams, due to the inability to complete the exam."

Why couldn't you complete the exam? Is there an issue created for that inability? Give some screenshots, please.
